Caméléon Creator Tutorials ***Chapter 0*** *First launch* *By Olivier Cugnon de Sévricourt*	In this tutorial, we speak about how to start working with Caméléon & Population.
	**You must have downloaded a Caméléon version from our web site.**
	In our case, we use the windows version. We now have a rar file in our hard disk.

	A rar file is a compressed file. You can **find** winrar everywhere on internet. Use it to decompress our files.
	**Extract** your file where your want.
	**Go** into the directory. We call this directory a Caméléon instance.

All right reserved - Olivier Cugnon de Sévricourt & Vincent Tariel - 2012

Click on cameleon to launch Caméléon on windows or cameleon-linux on linux.

On linux you need to **make the file executable** using those command lines:

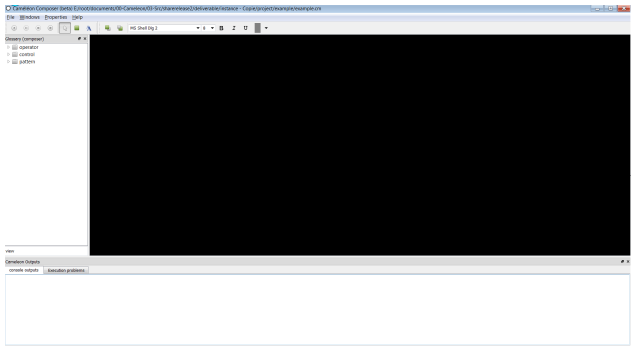

chmod u+x cameleon.sh
chmod u+x bin.ide.exe

And then launch the command

./cameleon.sh

Caméléon launcher appear.

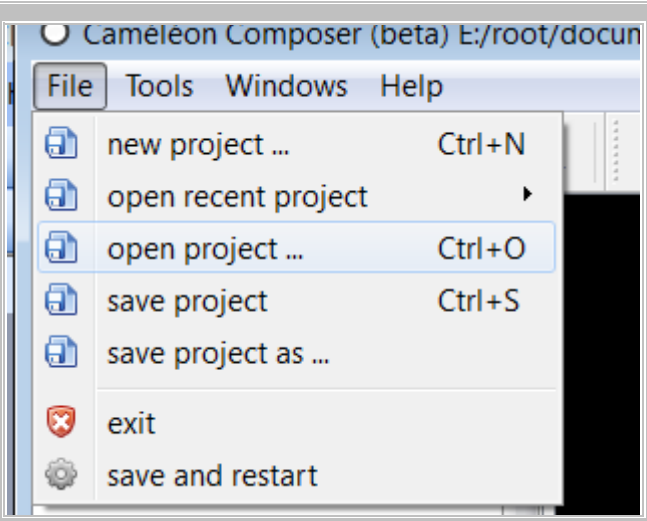

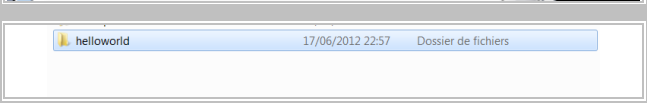

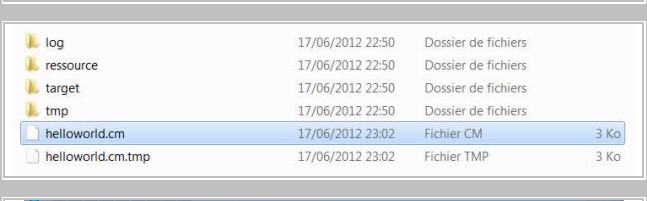

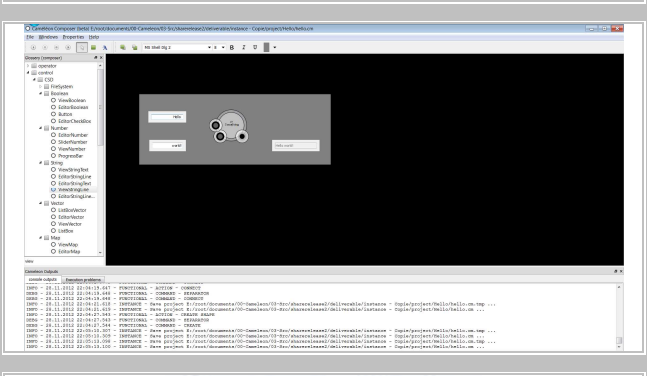

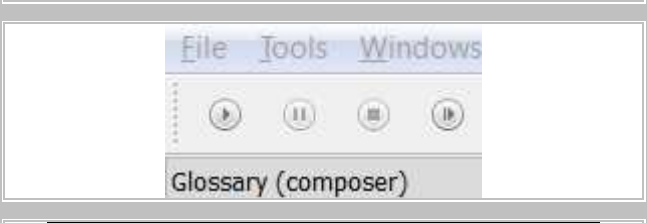

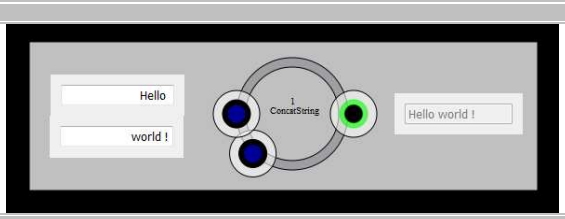

And now, you're in Caméléon Creator.

Caméléon creator is composed by two windows: composer & controller.

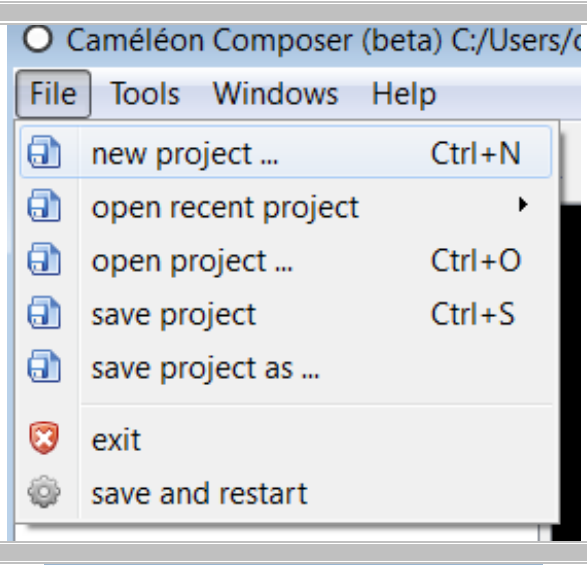

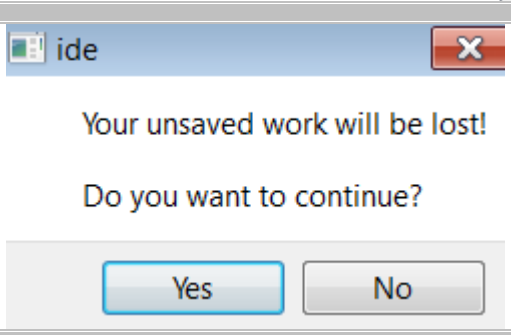

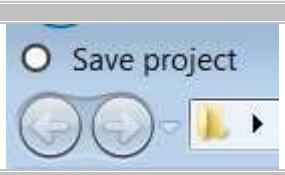

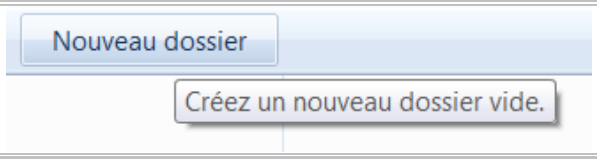

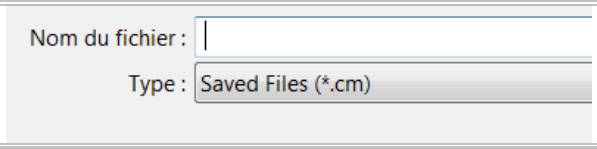

The composer window is used to design, build & finalize a data process.

The controller windows is used to design & prototype user interfaces. This window is hide at first launch. You can show this window by accessing the Windows menu and then click on the controller menu.

	**Select** File>open project ...
	**Go** into the project/hello directory.
	**Double click** on the file hello.cm.
	The project is **open**.
	**Launch** it using the play button at the left of the tool bar.
	Now you see the result !

	**Create** a new project using File>new project ...
	**Press** yes.
	A save project window appear**.**
	**Create** a new directory where you will save your project. **Go** into this directory.
	**Set** a *.cm file name and press save.

All right reserved - Olivier Cugnon de Sévricourt & Vincent Tariel - 2012

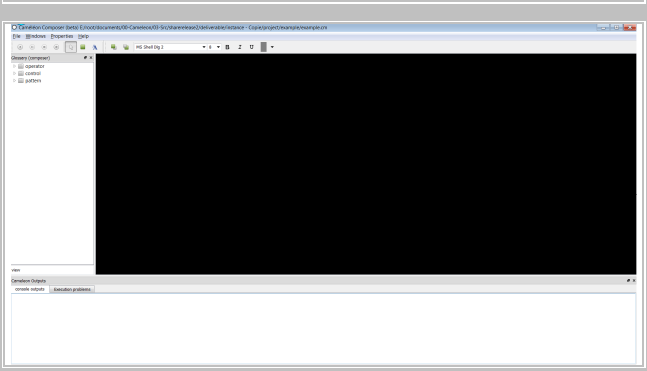

Your project isn't just a file, it's a *.cm program & a working directory tree.

That's why you need to save it into an empty directory.

We advice you to save your projects in a different directory than the Caméléon directory.

You can follow the next tutorial to see how to **code graphically** a process prototype.

The end.
