Caméléon Creator Tutorials
Chapter 4
Share your work

By Olivier Cugnon de Sévricourt

In this tutorial, we speak about how to **share** your work.

We use the 3 projects created during the last 3 tutorials.

The prototype.
The application with GUI.
The application with CLI.

If you just want to share your project as a Caméléon projet, just **go** to your project directory & **share** your directory containing your *.cm file.

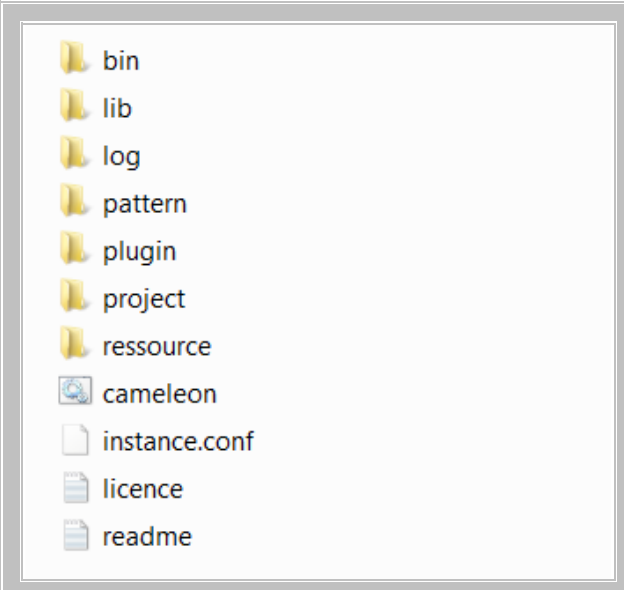

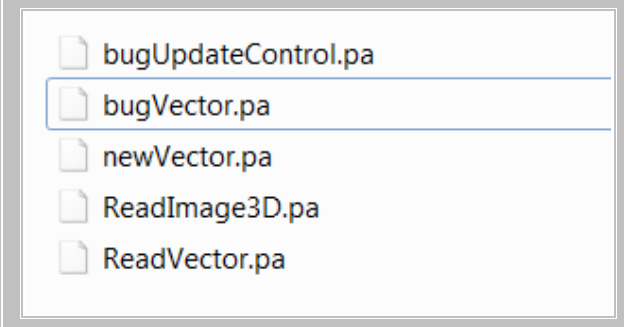

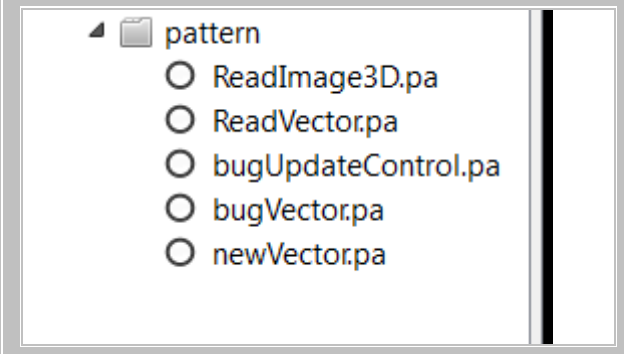

Be carefull to clean your tmp *.bck & *.tmp files to avoid a to big file.

You can use the resource directory to put data needed by your prototype.

You can use rar or tar to compress your directory and share it (by mail, on web site or by sending us your work :).

If you have no resource to share, you can directly share the *.cm file.

	If you have created pattern, you can go to your instance directory, and then in the pattern directory.
	If a co-worker send you a *.pa file, you will have to put the file here to use it with your Caméléon instance.
	If you want to share a pattern with a co-worker, you juste have to send to him a *.pa file and restart Caméléon.
The end.	That's it.
